* A recent paper by Duckworth *et al.* (2009) states that "modern claims of Fishing Cat from Sumatra are misidentifications or cannot be objectively confirmed. Surveys have been inadequate to state that fishing cat does not inhabit Sumatra, so for now the question remains open."

This includes a single indirect record from a previous study that puts this species on Harapan Rainforest's mammal list. Therefore, the presence of this species is uncertain. We hope that ongoing surveys will help clarify this issue.
